

Same candidates

Same budget: remove one weight

	w_1	w_2	w_3	w_4
Original weights W	1	1	2	2

Immediate damage $\hat{D}$

1.0	1.2	4.0	6.0
-----	-----	-----	-----

prune minimum

0	1	2	2
---	---	---	---

Damage-only ($\eta = 0$)

Prune w_1 : $\hat{D} = 1.0, \hat{I} = 1.0$

Predicted recovery $\hat{R}$	0.0	0.4	1.6	0.0
------------------------------	-----	-----	-----	-----

DAP score $\hat{D} - \hat{R}$

1.0	0.8	2.4	6.0
-----	-----	-----	-----

prune minimum

1	0	2	2
---	---	---	---

DAP

Prune w_2 : $\hat{D} = 1.2, \hat{I} = 0.8$

DAP can accept greater immediate damage when predicted recovery more than offsets it.

Illustrative single-weight removals; all damage and recovery scores are local predictions.
